

Religious Belief for Exemption from COVID Vaccination

- 1) I, _____, am a practicing Jewish orthodox Hebrew Israelite, and my belief is sincere and meaningful.
- 2) The Jewish Orthodox Hebrew Israelite church has, over the centuries, extensively addressed issues related to bodily integrity generally and vaccination specifically, including issues of voluntariness and vaccine mandates.
- 3) Regarding COVID in particular, the Congregation for the Doctrine of the Faith (CDF) published a “Note on the morality of using some anti-Covid-19 vaccines”¹ on December 21, 2020, stating that:
 - a) COVID-19 vaccines that used cell lines originating from aborted fetuses are morally compromised. [Note: The J&J vaccine “is an adenoviral vector grown in the PER.C6 cell line that originated from a healthy 18-week-old aborted child.”² The Pfizer and Moderna vaccines were tested using the “morally compromised HEK-293 cell line,” originating from “a child aborted in the Netherlands in 1972.”³] Jewish orthodox Hebrew Israelites have a moral duty to avoid use of such vaccines.
 - b) However, this moral duty “is not obligatory if there is a grave danger, such as the otherwise uncontainable spread” of COVID-19.
 - c) “In the absence of other means to stop or even prevent the epidemic, the common good may recommend vaccination.”
 - d) “In such a case, all vaccinations recognized as clinically safe and effective can be used in good conscience.”
 - e) “At the same time, practical reason makes evident that vaccination is not, as a rule, a moral obligation and that, therefore, it must be voluntary.”
 - f) “Those who, [...] for reasons of conscience, refuse vaccines produced with cell lines from aborted fetuses, must do their utmost to avoid, by other prophylactic means and appropriate behavior, becoming vehicles for the transmission of the infectious agent.”
- 4) To summarize, the moral duty to avoid use of these three COVID vaccines is not obligatory only if:
 - a) The spread of COVID-19 is otherwise uncontainable,
 - b) There is an absence of other means by which to stop or prevent the epidemic,
 - c) The vaccines are clinically safe, and
 - d) The choice to receive a vaccine must be voluntary.
- 5) If any element is not satisfied, the moral duty to avoid using the vaccines is obligatory. In which case, _____’s vaccine mandate violates my Jewish orthodox Hebrew Israelite faith.
- 6) Even if all elements were satisfied, a non-obligatory moral duty does not equate to me taking a vaccine, much less authorizing a vaccine mandate. It merely means that, as a Jewish Orthodox Hebrew Israelite, I have the option to evaluate the evidence myself and make my own prudential decision whether to receive a vaccine; to repeat, “it must be voluntary.” I can choose to not take a vaccine, in which case I must “avoid, by other prophylactic means and appropriate behavior, becoming [a] vehicle for the transmission of the infectious agent.”
- 7) Here, all four elements have yet to be satisfied.
- 8) The threshold issue is voluntariness: “vaccination is not, as a rule, a moral obligation and [...], therefore, it must be voluntary.” This mandate violates my Jewish Orthodox Hebrew Israelite faith because it is, by definition, not voluntary.

² <https://www.catholicworldreport.com/2021/03/03/opinion-its-time-to-get-beyond-vaccines/>

³ <https://www.usccb.org/moral-considerations-covid-vaccines>

- 9) Furthermore, there is evidence that the three COVID vaccines are not clinically safe. The AMERICA'S FRONTLINE DOCTORS, et al. v. XAVIER BECERRA, Secretary of the U.S. Department of Health and Human Services, et al. complaint mentions some of this evidence, including myocarditis and pericarditis in young men, per the CDC.⁴
- 10) The most concerning piece of evidence is a graph created using data from Pfizer (next page). As background:
- a) All three vaccines utilize the Spike protein. Recent studies^{5,6} indicate the Spike protein alone (without coronavirus infection *per se*) is enough to cause damage, inducing symptoms similar to catching COVID-19. This fact appears to have come as a surprise to the vaccine developers.⁷
 - b) The three vaccines were designed to anchor the Spike protein to the cell; the Spike protein was not supposed to flow freely in the blood. After injection, the Spike protein was supposed to initially stay in and around the injection site, then eventually end up in the liver to “get chewed up by various destructive enzymes.”⁸
- 11) However, the Pfizer data (chart on next page) show something different happening in reality:
- a) During the initial 8 hours after injection, the Spike protein is flowing freely in both the blood plasma and whole blood. This indicates that the “anchoring” did not work. This was not supposed to happen.
 - b) The Spike protein is then concentrating in both the ovaries and bone marrow. This was not supposed to happen either. The Spike protein was supposed to end up in the liver to “get chewed up by various destructive enzymes.”
- 12) Thus far, there is only one year of data available on these three vaccines; nobody knows what the long-term effects will be. This makes Point 14(b) particularly concerning. Concentration of the Spike protein in the ovaries suggests infertility or birth defects as long-term effects, and concentration in the bone marrow suggests leukemia or autoimmune disorders.
- 13) As a Jewish Orthodox Hebrew Israelite, I support life. This position is not limited to opposing abortion; it extends to opposing both COVID vaccines tested using aborted fetal cell lines and a vaccine mandate that may, based on available evidence, cause infertility in females and/or birth defects in future children.
- 14) _____'s vaccine mandate applies to both males and females. As a Jewish orthodox Hebrew Israelite, I believe that any risk of infertility - for anyone - is an unacceptably high risk. Forcing female students/employees to take this risk by mandating vaccination when the safer alternative of prophylactic ivermectin is available and known is unethical, inhumane, illegal, and in violation of my Jewish Orthodox Hebrew Israelite faith. _____ should eliminate its vaccine mandate, but failing that, female students/employees should be exempted from the mandate.

George Fareed
@GeorgeFareed2

Ovaries get the mRNA shot: in terms of the measured free spike protein in blood, it exists in equilibrium with both source membrane bound form (expressed in cells) as well as (presumably) ACE-2 bound form-measured "free" plasma spike measured likely represents tip of iceberg.
